

Mobile Video Console

The Mobile Video Console from Creative Learning Systems offers professional-grade production equipment in a portable, easy-to-operate system. Your students can now film school events, create dynamic video productions, and even broadcast live, over the internet to parents and the school community. It's a fun, engaging way to develop communications and language skills as your students build 21st Century skills such as critical thinking, project planning, team building and collaboration.

The Mobile Video Console features a digital audio/video mixer that seamlessly integrates live or recorded input. It includes two professional-quality video cameras and a computer workstation with DVD recorder and flat-panel monitor array. An integrated video converter creates digital video streams suitable for live or prerecorded webcasts of school events.

The system's digital mixer allows students to create dynamic, professional video productions. Transitions, fades, wipes, virtual sets and other effects are created easily and on-the-fly. Students will use the robust video-editing suite and computer workstation to create amazing post-production video effects. We've even included an extensive digital media library with sound effects, background music, video clips and backdrops to add even more professionalism to student productions!

The entire system is securely mounted on a sturdy, mobile workstation. It can be safely and easily moved anywhere in the school: classrooms, auditorium, gymnasium – or simply use the cameras and editing software to produce video segments for later broadcast.

Learning comes alive with engaging video projects. Speakers, performances and ceremonies can be recorded and even broadcast over the web. Teachers and students can produce engaging, instructional videos. Your school can film and broadcast sporting events – even create a highlight reel. Professional

development, training and administrative communications can be recorded and viewed over the school network. Video yearbook supplements and daily announcements are easily produced. And these are just a few examples!

Just a few of the many uses...

- *Student video projects to enhance learning*
- *Live webcasts of sporting and school events*
- *Record speakers, performances and ceremonies*
- *Daily video announcements*
- *Professional development and training*
- *Video yearbook supplements*

Your Mobile Video Console includes the Teleprompter and Chroma-Key Virtual Set Systems. Each is configured to integrate seamlessly and is designed for easy operation by students and teachers.

Teleprompter System

Ever wonder how television news anchors can read a script without ever looking away from the camera? Teleprompter technology allows prewritten scripts to scroll over specially-designed screens placed directly in front of the camera lens. The Mobile Video Console teleprompter system allows students to use this professional production technique easily and economically. It's a terrific way to build reading and writing skills while adding even more professionalism to video productions. The Teleprompter System includes an LCD flat-screen teleprompter, mounting equipment, computer software and USB control shuttle.

Chroma-Key Virtual Set System with LED Light Ring Technology

Once possible only in expensive studio settings, the Mobile Video Console incorporates the very latest in chroma-key technology to create virtual sets and backdrops – maintenance free and for a fraction of the cost! The Mobile Video Console uses LED light rings and a specially-designed reflective gray screen to create these sophisticated effects in a portable, easy-to-use system.

Your students can now create professional-looking virtual backdrops – live, and with the simple flip of a switch! Broadcast morning announcements from a virtual “news center”. History classes can recreate a civil war battle using authentic backdrops. A science report on Mars can be presented from the surface of the red planet. Students can stand in front of virtual maps, charts and graphics just like professional television reporters. The possibilities are unlimited.

“We keep finding new ways to use it. I don’t think our kids even realize how much they’re learning!”

Jesse Gray

Facilitator, Ronan Middle School - Ronan, MT

A Mobile Video Console from Creative Learning Systems is the most flexible, fully-featured and economical professional-grade video production platform available anywhere. And, like all of our learning systems, it includes full installation, professional development and technical support services. Let us tell you more about how your school can record special events, broadcast live over the internet, create video announcements, and build 21st Century skills with the Mobile Video Console. Call us at (800)458-2880 for more information.
